

Chamber of Commerce Kiosk Solution

Phoenix Kiosk's Chamber of Commerce Kiosk allows users to access valuable visitor information through an efficient web-based application. The Chamber of Commerce solution is designed for both kiosks and public computers. Visitors can search and retrieve information within a customizable directory of places to go, eat, learn, and explore. A touch screen or keyboard/mouse can be used for easy navigation.

The Phoenix Kiosk Chamber of Commerce solution will allow you to:

- Make Your Visitors Guide Digital & Interactive
- Provide Helpful Information to Your Visitors/Users
- Provide Added Value & Increased Revenues for Members
- Enhance and Modernize Your Brand
- Update Your Directory in Real-Time

When a visitor approaches the Chamber of Commerce kiosk, they are greeted with an interactive splash screen that displays customizable advertising and imagery. Once the visitor begins to interact with the system, they are taken to a main menu of customizable category buttons (attractions, points of interest, lodging, etc.).

Depending on what category the visitor chooses, they are shown a specific listing of member organizations. They can read further details about the member (address, phone, specials, amenities, photos, availability and much more), or view an on-screen map of the member's location. Visitors can even call the member through the kiosk system or receive a text message from the member. *

We are the first chamber in the Valley to offer such a high-tech program, especially for people starting new businesses. Our kiosks bring together businesses and provide valuable information for them including marketing data, legal advice, financing, technology, education, and demographics.

Chandler Chamber of Commerce – Chandler, AZ
